

tesseract_planning
::TrajectoryContainer

std::vector< std::reference
_wrapper< tesseract_planning
::InstructionPoly > >

tesseract_planning
::InstructionsTrajectory

trajectory

```
graph LR; A[tesseract_planning::TrajectoryContainer] -- blue arrow --> B[tesseract_planning::InstructionsTrajectory]; B -. "trajectory" .-> C[std::vector< std::reference_wrapper< tesseract_planning::InstructionPoly > >];
```

The diagram illustrates the relationships between three C++ types. A solid blue arrow points from `tesseract_planning::InstructionsTrajectory` to `tesseract_planning::TrajectoryContainer`. A dashed purple arrow, labeled "trajectory", points from `tesseract_planning::InstructionsTrajectory` to `std::vector< std::reference_wrapper< tesseract_planning::InstructionPoly > >`.
